

For the Birds

Special Announcement

Public Service Announcement re: Humming Birds for all HummingBird Feeders

From #animalprotectionaffiliates

The ongoing research & testing carried out by *#animalprotectionaffiliates* shows that certain feedings for “Hummingbirds” make them unable to retract the tongue due to the fungal spores that have germinated on the tongue or in the gullet. Mixing honey with anything, using organic or raw sugar, honey or artificial sugar-water may cause this problem because they are unable to feed.

USE ONLY PLAIN WHITE SUGAR WITH WATER @ 1 PART SUGAR TO 4 PARTS WATER.

No honey, raw or brown sugar and no commercial toxic colored red sugar. The white sugar is most similar to their actual nectar. Also the commercial colored liquid will ferment if it sits out.

Jim Murlin
